Overview

From the moment I produced a “Hello World” in the console of my first application I knew I was hooked into Software Development. This has led me to continuously learn new technologies to improve my skills.

Below you’ll see projects I have completed to showcase my skills in software development.

Experience

Personal Dashboard

- This is a cool personal dashboard that is a chrome extension that opens every time you open a new tab.

- This project utilizes DodgeCoin API, OpenWeatherMap API and Unsplash API through Javascript, HTML and CSS.

Startup Website (eEducation Web)

- Even though I used JavaScript in this project, I was challenged by CSS to make a good-looking layout.

- The website also features a form that can a potential student can fill in to enroll or ask questions.

NFT Product Page

- I did not use any JavaScript in the project, I only used pure CSS and HTML, simple as it may sound but the project really engraved the layout skills and improved my responsive site design skills.
